[Linkedin](#) | [GitHub](#) | [Portfolio Slte](#)

Software Developer with hands-on experience building full-stack web applications, RESTful APIs, and cross-platform mobile solutions. Proficient in React, Next.js, Node.js, and TypeScript, with strong expertise in database optimization, system debugging, and end-to-end test automation using Appium and Selenium. Proven track record of transitioning system support insights into maintainable code features and operational tools in agile team environments.

Working Experience

HAUD	Nov 2021 - Present
Junior Software Developer (formerly IT Support Engineer)	
- Full-Stack Web Development: Developed and maintained responsive full-stack web applications using React and Next.js, delivering dynamic user interfaces and optimizing web performance. - Backend Engineering & API Design: Built, maintained, and optimized scalable Node.js backend services and RESTful APIs, improving system reliability across 20+ core API endpoints. - Modern E2E Test Automation: Designed and maintained end-to-end automation test suites using Playwright (TypeScript) alongside existing Java, Selenium, and Appium frameworks, executing 1,500–2,000 automated daily tests and cutting manual testing efforts by ~40%. - Full-Cycle Mobile Development: Designed and built the <i>NVision</i> Android application from scratch using Java and Android Studio to streamline daily client operational data submissions for 20–40 daily active users. - Database Management & Optimization: Engineered and optimized MySQL queries and database tables to support operational reporting and improve overall data reliability by 15–20%. - Internal Tooling & Hardware Prototyping: Developed custom internal testing tools and IoT prototypes using Arduino and Raspberry Pi to automate manual processes across quarterly engineering initiatives. - Production Support & Debugging: Conducted root-cause analysis on production issues through log analysis and database debugging, collaborating with QA and product teams to resolve 15–20 bugs per month prior to release. - Agile SDLC Delivery: Managed tasks and tracked technical issues using JIRA across 3–5 monthly release cycles, translating support insights directly into system enhancements.	

Personal Projects

Neighborhood Watch App (Community Reporting Platform)	
- Designed and developed a full-stack application using Node.js, Express.js, and MySQL for backend and Flutter for mobile app for reporting and tracking local incidents (e.g., infrastructure issues, lost pets) - Integrated location-based services and interactive features (maps, reactions, reporting) to enable real-time community engagement	
Automatic Plant Watering System	
- Developed an IoT-based system using Arduino, Angular, Express.js, and Firebase for real-time monitoring and auto-watering - Implemented sensor-based triggers and a monitoring dashboard to control and monitor plant conditions	
Game Store Website	
- Built an e-commerce web app using PHP (CodeIgniter) and MySQL for product catalog and transaction handling - Designed backend logic and database schema to manage products and orders efficiently	

Skills

Programming & Web Development
JavaScript, TypeScript, Node.js, Express.js, React, Next.js, Angular, Java, PHP, REST APIs, HTML, CSS
Automation & Testing
Appium, Selenium, Playwright, End-to-End (E2E) Testing, Automated Testing
Database
MySQL, Firebase, Query Optimization
Tools & Environment
Git, JIRA, Postman, Linux, Bash, Cron, Android Studio, XAMPP, Arduino, Raspberry Pi
Language
English (Advanced)

Education Level

Universitas Nusa Mandii
Bachelor's Degree in Informatics GPA 3.73/4.00
Mar 2023 – Mar 2024
Universitas Bina Sarana Informatika
Associate Degree in Computer Engineering GPA 3.64/4.00
Jan 2017 – Nov 2020
